

## Danger Level 3 - Considerable

**Tendency: Constant avalanche danger** →  
on Friday 22 11 2019

Wind-drifted  
snow

Treeline

Gliding snow

Treeline

More small and, in isolated cases, medium-sized moist loose snow avalanches are possible. The danger of moist avalanches will increase a little during the day.

On very steep grassy slopes more small and, in isolated cases, medium-sized gliding avalanches are possible. Elsewhere, avalanches can as before be released, in particular by large loads, in particular on wind-loaded slopes. The prevalence of avalanche prone locations and likelihood of triggering will increase with altitude.

## Snowpack

### Danger patterns

dp 2: gliding snow

40 to 100 cm of snow, and even more in some localities, has fallen in the last few days above approximately 1500 m. The snowpack remains moist at low and intermediate altitudes.

Over a wide area fresh snow and wind slabs are lying on soft layers, especially above the tree line. Moist avalanches can in isolated cases be triggered in deep layers and reach medium size.

## Tendency

The danger of moist avalanches will increase a little during the day.

## Danger Level 3 - Considerable

**Tendency: Decreasing avalanche danger**  
 on Friday 22 11 2019

Gliding snow

2600m

Wind-drifted  
 snow

2200m

### Wind slabs above approximately 2200 m. Gliding snow requires caution.

On steep grassy slopes more gliding avalanches are possible, even quite large ones. Caution is to be exercised in areas with glide cracks. The fresh wind slabs are extensive and can in some cases be released easily especially at their margins. Caution is to be exercised in particular adjacent to ridgelines. The prevalence of avalanche prone locations and likelihood of triggering will increase with altitude. Large avalanches are possible in isolated cases, especially in high Alpine regions. Snow sport activities outside marked and open pistes call for experience in the assessment of avalanche danger.

### Snowpack

**Danger patterns**

dp 2: gliding snow

dp 6: cold, loose snow and wind

The snowpack will be moist at low and intermediate altitudes. In some places wind slabs are lying on soft layers, in particular on shady slopes as well as adjacent to ridgelines in high Alpine regions.

### Tendency

The danger of gliding avalanches and snow slides will decrease gradually.

## Danger Level 2 - Moderate

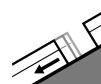

**Tendency: Constant avalanche danger** →  
on Friday 22 11 2019

Wind-drifted  
snow

Treeline

Gliding snow

Treeline

Individual mostly small moist loose snow avalanches are possible. The danger of moist avalanches will increase a little during the day.

On very steep grassy slopes individual mostly small gliding avalanches are possible. Elsewhere, avalanches can in some places be released, mostly by large loads, but they will be small in most cases, in particular on wind-loaded slopes. The prevalence of avalanche prone locations and likelihood of triggering will increase with altitude.

### Snowpack

#### Danger patterns

dp 2: gliding snow

The snowpack remains moist at low and intermediate altitudes. Over a wide area fresh snow and wind slabs are lying on soft layers, especially above the tree line. Dry and moist avalanches can in isolated cases penetrate deep layers and reach medium size.

### Tendency

The danger of moist and wet avalanches will increase a little during the day.
