

## Danger Level 2 - Moderate

**Tendency: Constant avalanche danger** →  
on Sunday 30 01 2022

### Fresh wind slabs are to be evaluated with care and prudence.

Fresh wind slabs represent the main danger. The fresh wind slabs can be released by a single winter sport participant in some cases at high altitudes and in high Alpine regions. The avalanche prone locations are to be found especially on steep shady slopes and adjacent to ridgelines and in pass areas. Avalanches are rather small. As a consequence of the strong wind the wind slabs will increase in size additionally. These are clearly recognisable to the trained eye. They are to be avoided especially in very steep terrain. In steep terrain there is a danger of falling on the hard snow surface.

### Snowpack

#### Danger patterns

dp.6: cold, loose snow and wind

The strong wind has transported the loosely bonded old snow. The fresh wind slabs are lying on soft layers in particular on steep shady slopes. The old snowpack will be in most cases stable. At elevated altitudes snow depths vary greatly, depending on the influence of the wind. Only a small amount of snow is lying for the time of year.

### Tendency

Fresh wind slabs require caution.

### Fresh wind slabs are to be evaluated with care and prudence.

Fresh wind slabs represent the main danger. The fresh wind slabs can be released by a single winter sport participant at high altitudes and in high Alpine regions. The avalanche prone locations are to be found especially on steep shady slopes and adjacent to ridgelines and in pass areas. In some cases avalanches are medium-sized. As a consequence of the strong wind the wind slabs will increase in size additionally. These are clearly recognisable to the trained eye.

### Snowpack

#### Danger patterns

dp.6: cold, loose snow and wind

5 to 15 cm of snow, and even more in some localities, fell on Friday. The strong wind has transported the new snow and, in some cases, old snow as well. The fresh wind slabs are lying on soft layers in particular on steep shady slopes. The old snowpack will be in most cases stable. At elevated altitudes snow depths vary greatly, depending on the influence of the wind. In particular on sunny slopes a little snow is lying.

### Tendency

Fresh wind slabs require caution.

## Danger Level 1 - Low

**Tendency: Constant avalanche danger** →  
on Sunday 30 01 2022

### Fresh wind slabs require caution.

Fresh wind slabs represent the main danger. The fresh wind slabs can be released in isolated cases at high altitudes and in high Alpine regions. The avalanche prone locations are to be found especially on steep shady slopes and adjacent to ridgelines and in pass areas. Mostly avalanches are small. As a consequence of the strong wind the wind slabs will increase in size additionally. These are clearly recognisable to the trained eye. They are to be avoided especially in very steep terrain.

In steep terrain there is a danger of falling on the hard snow surface.
