

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Wednesday 30 03 2022

The conditions are favourable.

In steep terrain there is a danger of falling on the hard snow surface. As a consequence of warming during the day there will be only a very slight increase in the avalanche danger. Individual gliding avalanches are possible.

Snowpack

Outgoing longwave radiation during the night will be quite good over a wide area. The surface of the snowpack will freeze to form a strong crust and will hardly soften at all.
Less snow than usual is lying.

Tendency

Some snow will fall on Wednesday in some localities.
