

## Danger Level 1 - Low

**Tendency: Constant avalanche danger** →  
on Saturday 08 04 2023

**Low avalanche danger will prevail.**

The snowpack is largely stable. From a snow sport perspective, in most cases insufficient snow is lying.

### Snowpack

The snowpack is largely stable. From a snow sport perspective, in most cases insufficient snow is lying.

## Danger Level 1 - Low

**Tendency: Constant avalanche danger** →  
on Saturday 08 04 2023

Wind slab

2600m

Snowpack stability: fair

Frequency: few

Avalanche size: small

The snowpack will be generally well bonded. Low avalanche danger will prevail.

The avalanche prone locations are to be found especially on extremely steep slopes above approximately 2600 m and in gullies and bowls. The wind slabs can be released in isolated cases, but mostly only by large additional loads,.

### Snowpack

The snowpack will be generally well bonded. The surface of the snowpack has frozen to form a strong crust and will hardly soften at all. In all aspects in all altitude zones only a small amount of snow is lying for the time of year. Below approximately 2000 m from a snow sport perspective, in most cases insufficient snow is lying.

### Tendency

The danger will persist.
