

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Sunday 09 04 2023

Low avalanche danger will prevail. From a snow sport perspective, in most cases insufficient snow is lying.

Low avalanche danger will prevail. From a snow sport perspective, in most cases insufficient snow is lying.

Snowpack

The snowpack is largely stable. From a snow sport perspective, in most cases insufficient snow is lying.

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Sunday 09 04 2023

Wind slab

2600m

Snowpack stability: **fair**

Frequency: **few**

Avalanche size: **small**

Low avalanche danger will prevail.

The avalanche prone locations are to be found especially on extremely steep slopes above approximately 2600 m and in gullies and bowls. The wind slabs can be released in isolated cases, but mostly only by large additional loads,.

Snowpack

The snowpack will be generally well bonded. The surface of the snowpack has frozen to form a strong crust and will hardly soften at all. In all aspects in all altitude zones only a small amount of snow is lying for the time of year. Below approximately 2000 m from a snow sport perspective, in most cases insufficient snow is lying.

Tendency

The danger will persist.
