## Danger Level 3 - Considerable

**AM:**

**Tendency: Constant avalanche danger** →  
 on Sunday 07 04 2024

Snowpack stability: **very poor**  
 Frequency: **few**  
 Avalanche size: **medium**

Snowpack stability: **very poor**  
 Frequency: **few**  
 Avalanche size: **large**

**PM:**

**Tendency: Constant avalanche danger** →  
 on Sunday 07 04 2024

Snowpack stability: **very poor**  
 Frequency: **some**  
 Avalanche size: **medium**

Snowpack stability: **very poor**  
 Frequency: **few**  
 Avalanche size: **large**

Snowpack stability: **poor**  
 Frequency: **some**  
 Avalanche size: **medium**

Wet and gliding avalanches are the main danger. Wet and gliding snow require caution.

As a consequence of warming during the day and the solar radiation, the likelihood of gliding avalanches and wet snow slides being released will increase quickly in all aspects. In isolated cases, wet avalanches can reach intermediate altitudes in steep gullies.

On steep grassy slopes medium-sized to large gliding avalanches are possible. This applies on steep sunny slopes in all altitude zones, as well as on steep shady slopes below approximately 2600 m. Areas with glide cracks are to be avoided.

### Snowpack

**Danger patterns**

dp.10: springtime scenario

dp.2: gliding snow

Outgoing longwave radiation during the night was reduced. The surface of the snowpack is not frozen and

will already be soft in the early morning. Sunshine and high temperatures will give rise as the day progresses to extreme and thorough wetting of the snowpack. This applies on sunny slopes in all altitude zones, as well as on shady slopes also at intermediate and high altitudes.

## Tendency

Until Monday the weather will be exceptionally warm. The danger of wet and gliding avalanches will persist.

## Danger Level 3 - Considerable

**AM:**

**Tendency: Constant avalanche danger** →  
 on Sunday 07 04 2024

Snowpack stability: **very poor**  
 Frequency: **few**  
 Avalanche size: **medium**

Snowpack stability: **poor**  
 Frequency: **some**  
 Avalanche size: **small**

**PM:**

**Tendency: Constant avalanche danger** →  
 on Sunday 07 04 2024

Snowpack stability: **very poor**  
 Frequency: **many**  
 Avalanche size: **medium**

Snowpack stability: **very poor**  
 Frequency: **few**  
 Avalanche size: **medium**

### Gliding avalanches and moist snow slides are the main danger.

On steep grassy slopes medium-sized gliding avalanches are possible. As a consequence of warming during the day and the solar radiation, the likelihood of gliding avalanches and wet snow slides being released will increase quickly in all aspects, not only on sunny slopes, including on steep shady slopes at intermediate and high altitudes. In isolated cases, wet avalanches can reach intermediate altitudes in steep gullies. Areas with glide cracks are to be avoided.

### Snowpack

**Danger patterns**

dp.10: springtime scenario

dp.2: gliding snow

Outgoing longwave radiation during the night will be reduced in some case. The surface of the snowpack will freeze very little and will already be soft in the early morning. This applies on sunny slopes in all altitude zones, as well as on shady slopes also at intermediate and high altitudes.

### Tendency

Until Monday the weather will be exceptionally warm. The danger of wet and gliding avalanches will persist.
